European Passport

Frontend Developer & Design Engineer with 6+ years building digital products end-to-end, from concept and interaction design through to shipped React, TypeScript, and Next.js code. My practice bridges UX design and frontend engineering: I have built responsive, sensor-driven interactive installations and production SaaS interfaces. I care about the craft of interaction and how something feels to use, beyond mere function.
My signature is bringing design sensibility into component architecture, performance, and quality code.

Skills

Frontend Development:
React, Next.js, TypeScript, JavaScript, styled-components, Claude, Copilot, TailwindCSS, ShadCN, Webpack, REST APIs, GraphQL APIs, Frontend Architecture, Performance Optimization, Component Design Systems

Design & Research:
Figma, Interaction Design, Visual and Sensory Design, Design Thinking, Product Discovery, Qualitative UX Research, User Journeys and Experience Mapping, Concept Development, Eye for detail.

Tools AI:
Git, CraftCMS, Adobe Suite, Three.js, GLSL, Blender, Copilot, Claude, Cursor Agents, Webflow.

AI Agents:
Copilot, Claude, Cursor Agents.

Languages:
English (Professional), Spanish (Native), French (Professional), Portuguese (Advanced), Dutch (Basic)

WORK EXPERIENCE

Founding Engineer & Creative Director | Carmela Collective *(Cultural Platform)*

September 2025 - Present / Amsterdam, Netherlands - Remote

- Led the end-to-end digital transformation of Carmela Collective, a Latin American music and culture platform in Amsterdam, owning brand identity, digital strategy, and the entire web ecosystem.
- Designed and shipped the full Next.js/TypeScript platform as a single engineer, using an AI-assisted workflow (Cursor, Claude, Copilot) in which I set the architecture, data model, and component conventions, and used AI to accelerate implementation against them.
- Applied AI as a design partner as well as a code generator: exploring competing implementations before committing to one, refactoring against my own conventions, and rejecting output that didn't hold up under review.
- Full leadership on web strategy and digital presence for Qommunity (Belgium), translating organisational mission into a coherent user experience and implemented platform. Engagement ongoing.
- Developing valmar.studio as an independent research and experience design practice, with Value Tuning as a standalone consulting service.

Technologies: React | TypeScript | Next.js | Webflow | TailwindCSS | Figma | Claude | Cursor Agent | Copilot

React Front-End Developer | Bravoure *(Product & Engineering)*

September 2023 - September 2025 / Amsterdam, Netherlands - Hybrid

- Developed multiple digital products across education, media streaming, and cultural platforms, collaborating closely with designers, product managers, and stakeholders.
- Translated product requirements and user needs into scalable frontend architectures and reusable design systems.
- Built and maintained component architecture using styled-components, establishing visual consistency and reusable UI patterns across products.
- Configured and maintained Webpack build pipelines, managing module bundling and optimizing for production performance.
- Established UI patterns, accessibility standards, and responsive behaviors across platforms.
- Migrated products to TypeScript to improve long-term maintainability and product scalability.

Technologies: React | TypeScript | Next.js | Git | TailwindCSS | REST APIs | GraphQL | CraftCMS | styled-components | Cursor Agent

React Front-End Developer | Autofill Technologies *(AI Technologies)*

May 2022 - August 2023 / Amsterdam, Netherlands - Hybrid

- Drove the evolution of a B2B SaaS customer dashboard, leading experience improvements from user feedback through to production implementation in close collaboration with UX and product stakeholders.
- Designed and built the reusable component architecture supporting consistency and scalability across a data-heavy product interface.

Technologies: React | TypeScript | Next.js | Git | REST APIs | Figma

Web Developer | Routinely *(E-commerce)*

September 2021 - April 2022 / Amsterdam, Netherlands - Hybrid

- Built responsive interfaces for a consumer skincare e-commerce product, integrating CMS and REST APIs to support dynamic content at scale.
- Contributed to a JavaScript-to-TypeScript migration, improving long-term product stability; first professional exposure to architectural refactoring at production scale.

Technologies: React | TypeScript | Next.js | Git | REST APIs | Figma | TailwindCSS

Design Researcher | Random Studio *(Creative Agency)*

January 2020 - November 2020 / Amsterdam, Netherlands - Hybrid

- Conducted creative and cultural research to inform physical-digital experiences.
- Translated abstract cultural insights into concept briefs and experiential design directions.
- Collaborated on installations combining physical space, narrative, and digital interaction.

Technologies: Adobe Suite

UX Researcher & Design Strategist | Signify Philips Lighting *(Consumer Products)*

June 2018 - April 2019 / Eindhoven, Netherlands - On site

- Developed Value Tuning, a qualitative UX research methodology to understand how physical product attributes shape perceived value and brand meaning.
- Led end-to-end user research for physical smart-home products, from methodology design to insight synthesis.
- Explored sensorial perception, materiality, and psychological value in domestic objects.

Eindhoven, Netherlands - On site

- Produced actionable insights to guide material, form, and quality decisions for future product development.
- Positioned products within a competitive landscape (Apple, IKEA, Google Home) based on lived user perception rather than features alone.

Technologies: Adobe Suite

Selected Personal Projects

Value Tuning Methodology | UX and Sensorial Research, Signify/Philips

Eindhoven, 2018-2019

- Developed this qualitative research methodology to decode how products communicate brand value through touch, weight, and material. valmar.studio/value-tuning

Visit: valmar.studio/value-tuning

Silence of Blue | Interactive and Spatial Systems

Independent, 2019

- Designed and built a sensor-driven interactive installation, using microphone input to trigger real-time, breath-responsive light and shadow systems. Exhibited at Embassy of Water, Eindhoven. Nominated, Melkweg Design Awards 2019.

Visit: valmar.studio/silence-of-blue

Education

SheCodes - License, Software Engineering *November 2020 - November 2021*

Digital Society School - Traineeship, Digital Transformation *January 2021 - August 2021*

Design Academy Eindhoven - Bachelor, Industrial Design *September 2015 - June 2019*

Haute Ecole des Arts du Rhin - Bachelor, Applied Arts *September 2013 - June 2015*
